

# StuDen Software Requirements Specification (SRS)

## - Version 1.0

### 1. Purpose

StuDen is a student opportunity platform where users can showcase their skills, publish services, discover talented students, and send booking requests. A single account can both offer and request services.

### 2. Objectives

- Enable students to build a professional profile and showcase.
- Allow users to publish services.
- Allow users to discover and hire other students.
- Provide messaging and booking requests.
- Build a scalable marketplace foundation.

### 3. User Types

**User:** Can browse, hire services, save services, message others, and optionally become a freelancer.

**Freelancer:** A user who creates a Student Portfolio and publishes services.

**Admin:** Moderates users, services and reports.

### 4. Functional Requirements

Authentication (signup/login), Student Portfolio, Showcase, Skills, Education, Certificates, Services, Categories, Search & Filters, Booking Requests, Messaging, Notifications, Saved Services, Admin Dashboard.

### 5. Core Database Entities
